THE BPM LIFECYCLE

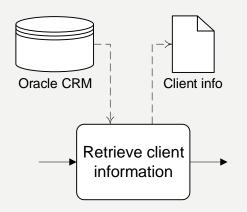

BUSINESS OBJECTS IN BPMN

A *Data Object* captures a business object required (input) or produced (output) by an activity.

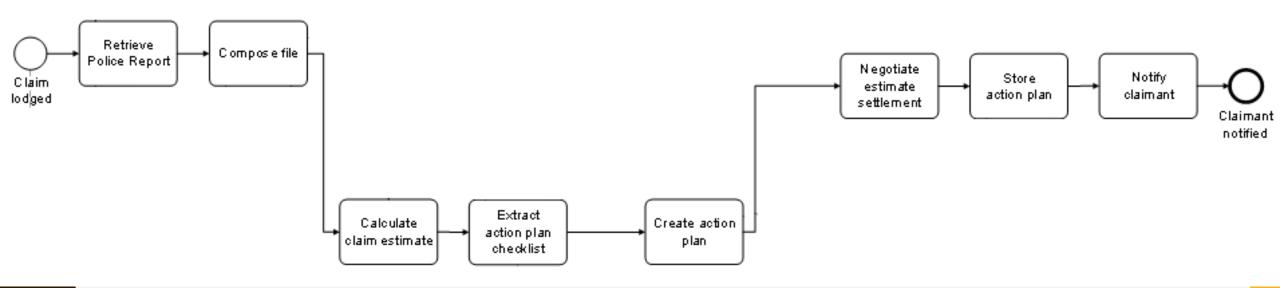

Can be physical or electronic

A *Data Store* is a place containing data objects that must be persisted beyond the duration of a process instance.

It is used by an activity to store (as output) or retrieve (as input) data objects.

ACTIVITY 1: ADD DATA OBJECT & DATA STORE

RESOURCES

Active resources:

- Process participant
- Software system
- Equipment

Resource class:

A group of (active) resources that are interchangeable, e.g. a role, an organizational unit or the whole organization.

BPMN ELEMENTS - POOLS & LANES

Pool

Captures a resource class. Generally used to model a business party (e.g. a whole company)

Lane

Captures a resource sub-class within a resource class by partitioning a pool. Generally used to model departments (e.g. shipping, finance), internal roles (e.g. Manager, Associate), software systems (e.g. DBMS, CRM)

BPMN ELEMENTS – MESSAGE FLOW

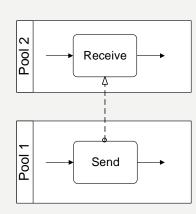

A Message Flow represents a flow of information between two process parties (Pools)

Aessage

A Message Flow can connect:

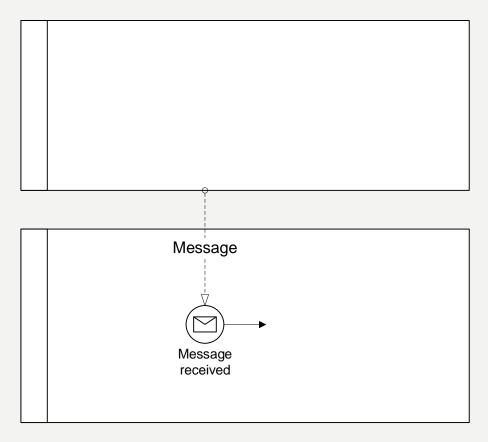

- directly to the boundary of a Pool → captures an informative message to/from that party
- to a specific activity or event within that Pool → captures a message that triggers a specific activity/event within that party

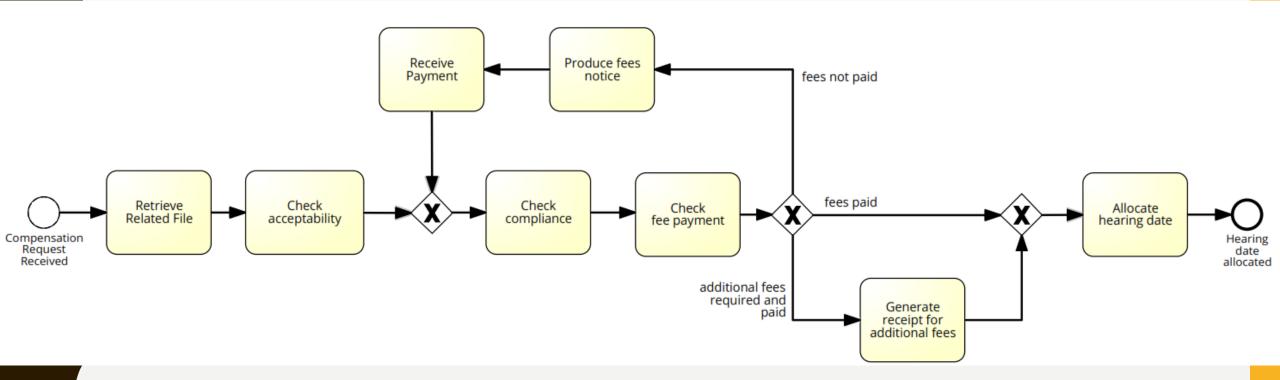

BPMN ELEMENTS – START MESSAGE EVENT

The start message event triggers a process by the receipt of a message when an incoming message flow is connected to the event

ACTIVITY 2

ADD DATA OBJECT & DATA STORE + POOL AND LANE

EXAMPLE: SUB-PROCESS WITH MULTIPLE END EVENTS

Quote-to-order
